Similundesu is?

- Handcraft dyeing ➡
 - Traditional, unique
 - Difficult to design
 - Difficult to make

Simulation by PC

1. Pattern generation readily
2. Simulation for real dyeing
3. Promoting culture

Yuzen

Batik

Shibori

Made by me
(non-expert)

expert

Same Kumo shibori

Name: “Similundesu”

- I love “Utsurun desu”
 - Comic book
 - Means “It infect”
 - “Similundesu” means “It diffuse”
- Global: “Similundesu”
 - **Simulation**, **Dye**,**Simulation**.
- Short name: “Similun”

“Similundesu” Dyeing pattern simulator

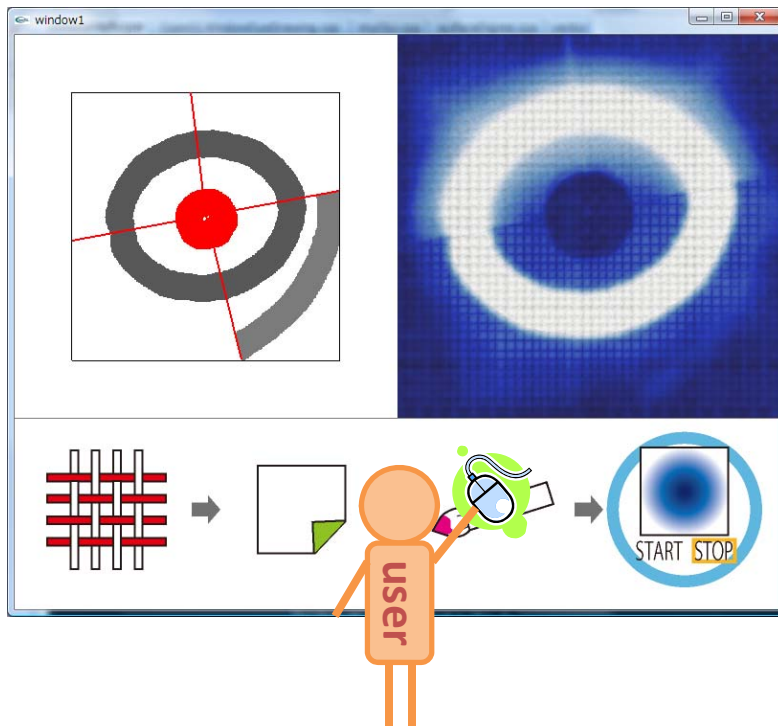

Basic CG tech for visual simulation of dyeing

Achieve!

Variable dyeing tech

+

Development of its application software

Creation time: 5 min

Target

1. Pattern generation readily
2. Simulation for real dyeing
3. Promoting culture (our aims)

- New computer graphics
- Non-expert for dyeing
- Designer
- Schools
- People who is curious about traditional culture

Rerated works

- research
- software
- service

Watercolor[Curtis 1997], Chinese Ink[Chu 2005], Batik[Wywill 2004]

水彩画風フィルタ
Adobe Photoshop

Art Brush
Adobe Illustrator

No dyeing pattern
simulators

Extraction of stencil
from design data
Armonics Co., Ltd.

Difficulties

- No **3D cloth structure** in the related works
- Folded and woven **Complicated cloth geometry**
- Simultaneous **physical phenomenon** (dye transfer)
- Real **dyeing tech. is varied**
- **Design by user**
- **Handmade** and **geometric factors**
- **World first!** dyeing pattern simulator

Future

Basic model

Dyeing tech

Appli

Similundesu.

Contents

Basic physical dyeing model

– Samples

Results with various tortuosity, porosity, and adsorption coefficient.

Results with different weaves.

Basic physical dyeing model

– Seikaiha pattern

2D distributions of dye and resist, its result, and real dyed pattern [[video](#)]

How to make Seikaiha

1. Fold a cloth
2. Stitch along to the blue dots in the left figure, and resist both wide sides of the folded cloth
3. Dip it into dye

Motivation

Dye transfer model

Dye Transfer Model

$$\frac{\partial f(\mathbf{x}, t)}{\partial t} = \underbrace{\nabla \cdot (D(\mathbf{x}) \nabla f)}_{\text{拡散}} + \underbrace{g_1(\mathbf{x}, f)}_{\text{供給}} - \underbrace{g_2(\mathbf{x}, f)}_{\text{吸着}}$$

- Diffusion Term
 - With our Diffusion Graph (new proposal)
 - $f(\mathbf{x}, t)$ = diffusion dye concentration
- Dye supply Term
 - With our Dye Supply Map (new proposal)
 - α_0 = user specified, $\alpha(\mathbf{x})$ = dye supply map
- Absorption Term
 - With Dyeing theories
 - β = user specified value, $h(\mathbf{x}, t)$ = absorption concentration,
 - $ad(\mathbf{x}, f)$ = adsorption model defined as theories,
 - C_d = capacity of diffusion concentration,
 - C_a = capacity of adsorption concentration.

$$g_1(\mathbf{x}, f) = \begin{cases} \alpha_0 \alpha(\mathbf{x}) & \text{if } \alpha(\mathbf{x}) - f(\mathbf{x}, t) > 0. \\ 0 & \text{Otherwise,} \end{cases}$$

$$g_2(\mathbf{x}, f) = \begin{cases} \beta f(\mathbf{x}, t) & \text{if } h(\mathbf{x}, t) < ad(\mathbf{x}, f). \\ 0 & \text{Otherwise,} \end{cases}$$

$$\frac{\partial h(\mathbf{x}, t)}{\partial t} = g_2(\mathbf{x}, f) \frac{C_d(\mathbf{x})}{C_a(\mathbf{x})}$$

Discretize the eq. according to the cloth geometry

Dye supply map for dip-dyeing

Dip-
dyeing

Outside parts
exposed to dyebath

Ex. Flower resist

Geometric feature Distance fields

3D geometry

2D distribution

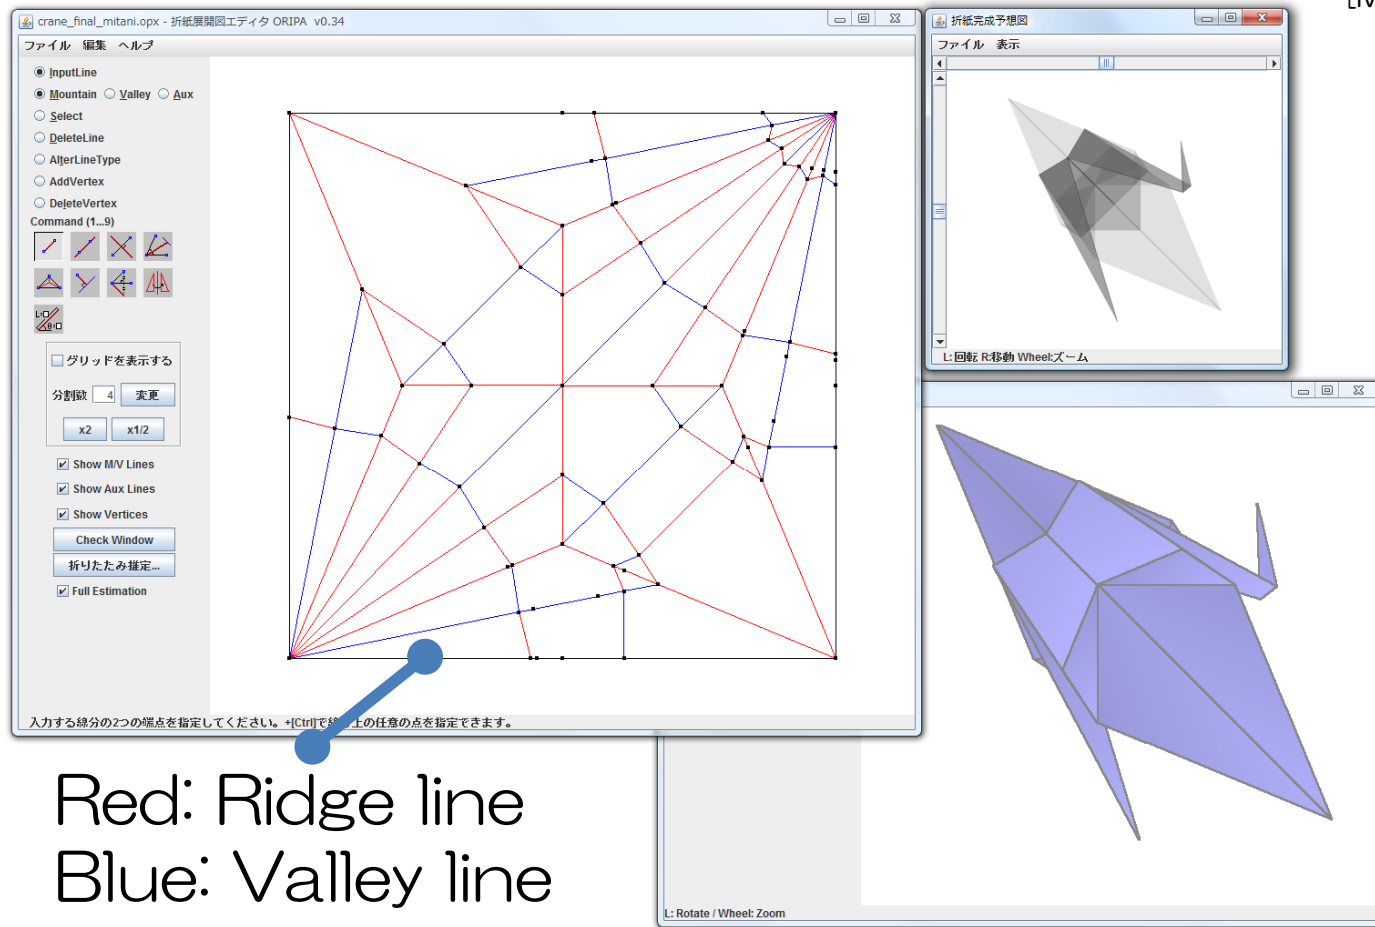

Broken geometry can be simulated.

Fold function 1: ORIPA

: free editor for development view of Origami

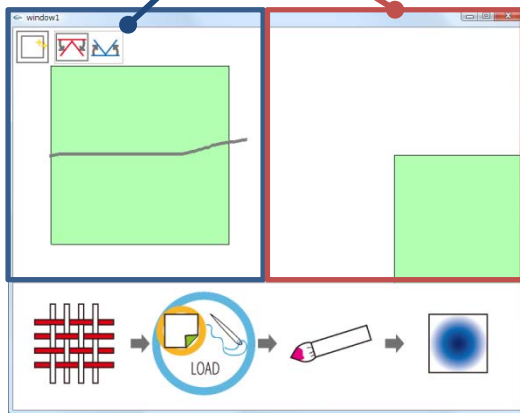

[Mitani 2008]

Fold function 2: Sequential fold

User specify lines to fold cloth sequentially

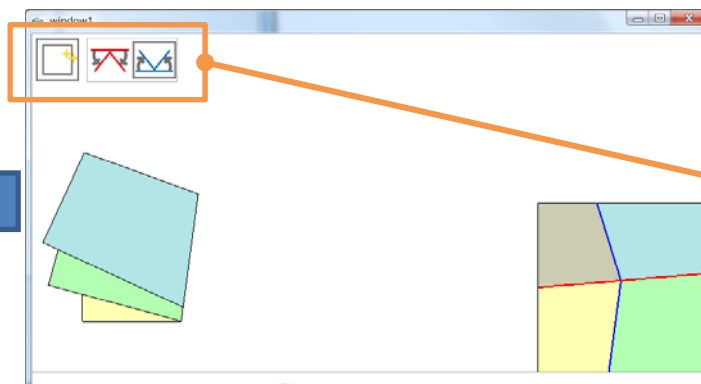

View: 3D, 2D

1. User draw a line

2. Divide the surfaces

4. folded

3. User specify a side to fold

手作り感

Fold function 3: Stitch

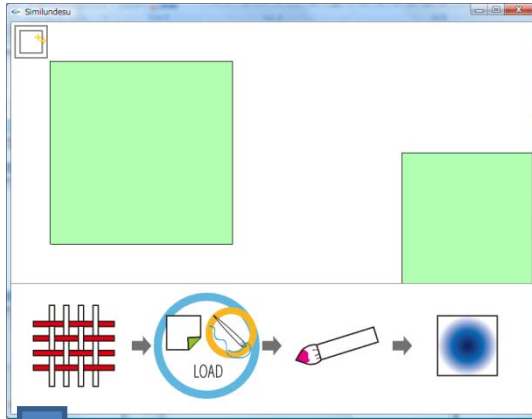

cloth

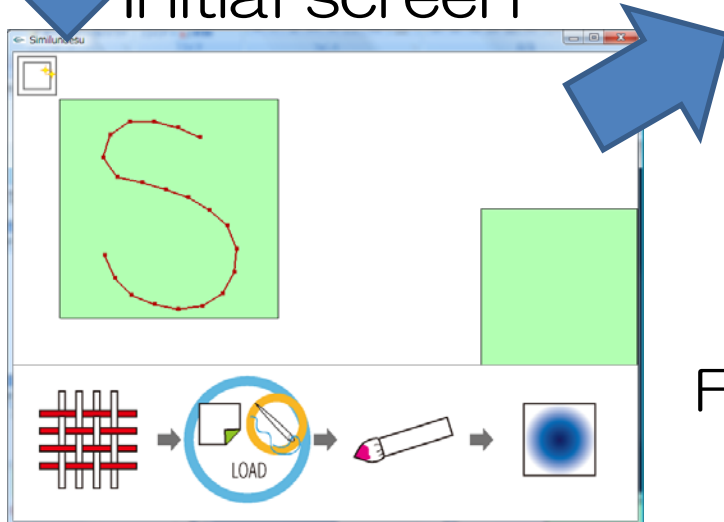

Voronoi diagram

Fold function 3: Stitch

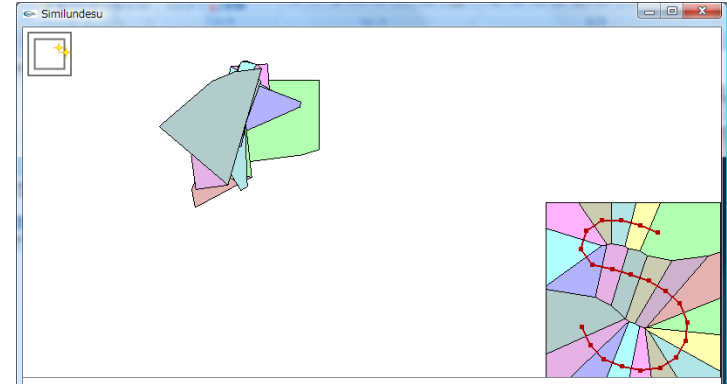

Generate 3D geometry by a user specified stitched line

Initial screen

1. User draws a stitched line

2. Segment the cloth By voronoi diagram assuming pinholes as points

Motivation

Dyeing

Similundesu

Basic model

Dyeing tech

Appli

Future

Similundesu.

Contents

Future <Web appli>

- Meaning
 - Dyed patterns are all unique.
 - Promotion of traditional culture.
- Building web system

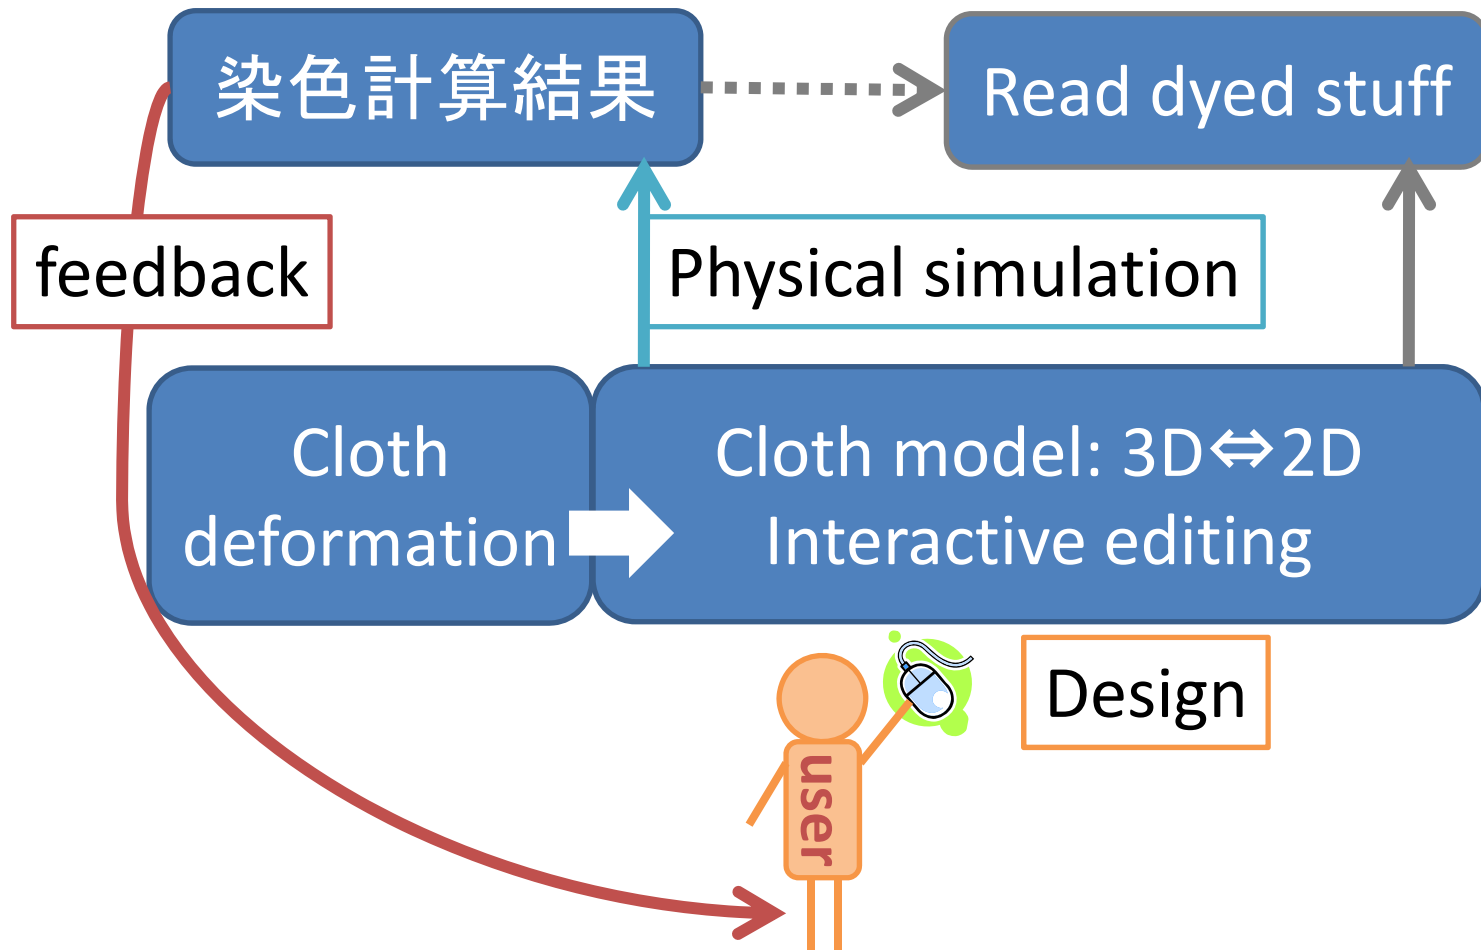

Future

- Local folding
- Mixing colors
- Improving UI
- Open to the public

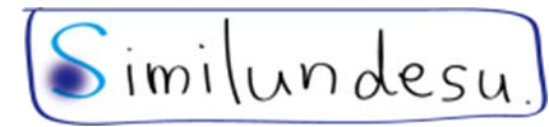

Conclusion

We achieve the new pattern generation by interactive editing between 2D/3D models of cloth deformation linked with simulation

Archievement

- No **3D cloth structure** in the related works
- Folded and woven **Complicated cloth geometry**
- Simultaneous **physical phenomenon** (dye transfer)
- Real **dyeing tech. is varied**
- **Design by user**
- **Handmade** and **geometric factors**
- **World first!** dyeing pattern simulator

The logo for Similundesu, featuring the word "Similundesu" in a stylized, handwritten font with a blue-to-purple gradient, enclosed in a hand-drawn rectangular border.
